

Western-Blot Apparatus

WB11

Features

WB11 is a high quality polycarbonate molded western blot apparatus for the transfer of protein molecules from gel electrophoresis to nitrocellulose and other films

- A seamless buffer tank prevent leakage & breakage
- Fast transferring speed and excellent effect
- Latches on the gel holder cassette for easy handling
- An efficient design simplifies insertion and removal of the gel holder cassette from electrode assembly
- Easy to thoroughly clean and repair

Specifications

Gel Size	95 x 87 mm
Transfer Time	45 ~ 90 minutes
Buffer Volume	1000ml
Dimension (mm)	210(L) x 180(W) x 190(H)
